THE IMPORTANCE OF VOCABULARY IN LANGUAGE LEARNING AND HOW TO BE TAUGHT

MOFAREH ALQAHTANI

Abstract:
Vocabulary learning is an essential part in foreign language learning as the meanings of new words are very often emphasized, whether in books or in classrooms. It is also central to language teaching and is of paramount importance to a language learner. Recent research indicate that teaching vocabulary may be problematic because many teachers are not confident about best practice in vocabulary teaching and at times don’t know where to begin to form an instructional emphasis on word learning (Berne & Blachowicz, 2008).

In this article, I summarizes important research on the impotence of vocabulary and explaining many techniques used by English teachers when teaching English, as well as my own personal view of these issues.

Introduction

Vocabulary, as one of the knowledge areas in language, plays a great role for learners in acquiring a language (Cameron, 2001). Harmon, Wood, &Keser, (2009) as well as Linse (2005) state that learners’ vocabulary development is an important aspect of their language development. Although it has been neglected for a long time, researchers have increasingly been turning their attention to vocabulary e.g. Carter and McCarthy (1988), Nation (1990), Arnaud and Bejoint (1992), Huckin, Haynes and Coady (1995), Coady and Huckin (1997), Schmitt (1997, 2000) Read (1997).

Literature Review

The importance of learning vocabulary

Vocabulary knowledge is often viewed as a critical tool for second language learners because a limited vocabulary in a second language impedes successful communication. Underscoring the importance of vocabulary acquisition, Schmitt (2000) emphasizes that "lexical knowledge is central to communicative competence and to the acquisition of a second language" p. 55)

Nation (2001) further describes the relationship between vocabulary knowledge and language use as complementary: knowledge of vocabulary enables language use and, conversely, language use leads to an increase in vocabulary knowledge.

The importance of vocabulary is demonstrated daily in and out the school. In classroom, the achieving students possess the most sufficient vocabulary.

Researchers such as Laufer and Nation (1999), Maximo (2000), Read (2000), Gu (2003), Marion (2008) and Nation (2011) and others have realized that the acquisition of vocabulary is essential for successful second language use and plays an important role in the formation of complete spoken and written texts. In English as a second language (ESL) and English as a foreign language (EFL) learning vocabulary items plays a vital role in all language skills (i.e. listening, speaking, reading, and writing (Nation, 2011). Rivers and Nunan (1991), furthermore, argue that the acquisition of an adequate vocabulary is essential for successful second language use because without an extensive vocabulary, we will be unable to use the structures and functions we may have learned for comprehensible communication.

Research has shown that second language readers rely heavily on vocabulary knowledge and the lack of that knowledge is the main and the largest obstacle for L2 readers to overcome (Huckin, 1995). In production, when we have a meaning or concept that we wish to express, we need to have a store of words from which we can select to express this meaning or concept. “When students travel, they don’t carry grammar books, they carry dictionaries” (Krashen, as cited in Lewis, 1993, p25)

Many researchers argue that vocabulary is one of the most important—if not the most important—components in learning a foreign language, and foreign language curricula must reflect this. Wilkins (1972) states that: “There is not much value in being able to produce grammatical sentences if one has not got the vocabulary that is needed to convey what one wishes to say … While without grammar very little can be conveyed, without vocabulary nothing can be conveyed” p97). Other
scholars such as Richards (1980) and Krashen (1989), as cited in Maximo (2000) state many reasons for devoting attention to vocabulary. “First, a large vocabulary is of course essential for mastery of a language. Second language acquirers know this; they carry dictionaries with them, not grammar books, and regularly report that the lack of vocabulary is a major problem”.

On the other hand, vocabulary has been acknowledged as L2 learners’ greatest single source of problems (Meara, 1980). This remark may possibly reflect that the open-endedness of a vocabulary system is perceived to be a cause of difficulty by learners. Another possible reason is that, unlike syntax and phonology, vocabulary does not have rules the learners may follow to acquire and develop their knowledge. In other words, it is not clear in L2 vocabulary learning what rules apply or which vocabulary items should be learned first. Oxford (1990) also claims that vocabulary is “by far the most sizeable and unmanageable component in the learning of any language, whether a foreign or one’s mother tongue, because of tens of thousands of different meanings” Despite these difficulties that language learners face in L2 vocabulary, they still have to deal with it in their examinations as “vocabulary has traditionally been one of the language components measured in language tests” (Schmitt, 1999, 189). Furthermore, many learners see second language acquisition (SLA) as essentially a matter of learning vocabulary and therefore they spend a great deal of time on memorising lists of L2 words and rely on their bilingual dictionary as a basic communicative resource. As a result, language teachers and applied linguists now generally recognise the importance of vocabulary learning and are exploring ways of promoting it more effectively. Some of this research takes the form of investigation of strategies learners use specifically for vocabulary (VLS), which is our focus of attention.

**English in the Saudi Educational System**

In the field of education, including English (from personal experience), education in Saudi Arabia is still dominated by the view that knowledge is a set of facts that have to be memorized. Teaching learning process as focuses on the teacher as a prominent source of knowledge. As a result, students may have problems to understand academic concepts as what they usually get is something abstract. Many students can serve a good level of memorization of teaching material but in the end of teaching learning process,” they actually do not understand it at all. Nation (2011) states Knowedge “is constructed by humans. Knowledge is not a set of facts, concepts, or laws waiting to be discovered. It is not something that exists independent of knower. Humans create or construct knowledge as they attempt to bring meaning to their experience. Everything that we know, we have made. Based on this opinion, a learning process that focuses on the teacher is no longer suitable. It is because our brain is continuously finding meaning and saving meaningful cases, and learning processes have to involve students in finding meaning.

Teaching and learning processes have to make it possible for the students to understand the meaning of their learning material. Students as the learning subject are the starting point in teaching and learning, which measure the success of the teaching learning process. Teaching and learning can be successful when the students can directly feel the advantages of learning materials by experiencing and learning it.
Going back to English in the Saudi educational system, children are eligible to go school consisting of pre-school, six years of primary school starting at the age of seven, and three years of intermediate (aged 13-15) and high (secondary) school (aged 16-18). English as a foreign language was added to the curriculum starting from the 4th grade of primary school (age 9). Students receive four 45-minutes lessons of English per week and they have to pass examinations in all subjects, including English, to move from one level to another.

From my personal experience over the many years I have been teaching in Saudi Arabia, I have become more and more aware that some of the most basic principles of vocabulary teaching and learning have been forgotten or ignored. In other words, I found that although teaching still focuses more on grammar than on vocabulary, students majoring in English rely heavily on their knowledge of vocabulary rather than on their knowledge of grammar in learning English. The more vocabulary students have at their disposal, the better they learn, regardless of their grammatical knowledge, although this is not to say that they should neglect grammar completely.

Teaching vocabulary

Recent research indicates that teaching vocabulary may be problematic because many teachers are not confident about the best practice in vocabulary teaching and at times do not know where to begin to form an instructional emphasis on word learning (Berne & Blachowicz, 2008). Teaching words is a crucial aspect in learning a language as languages are based on words (Thornbury, 2002). It is almost impossible to learn a language without words; even communication between human beings is based on words. Both teachers and students agree that acquisition of the vocabulary is a central factor in teaching a language (Walters, 2004). Teaching vocabulary is one of the most discussed parts of teaching English as a foreign language. When the teaching and learning process takes place, problems would appear to the teachers. They have problems of how to teach students in order to gain satisfying results. The teacher should prepare and find out the appropriate techniques, which will be implemented to the students. A good teacher should prepare himself or herself with various and up-to-date techniques. Teachers need to be able to master the material in order to be understood by students, and make them interested and happy in the teaching and learning process in the classroom.

The teachers should be concerned that teaching vocabulary is something new and different from student’s native language. They also have to take into account that teaching English for young learners is different from adults. The teachers have to know the characteristics of his/her learners. They moreover need to prepare good techniques and suitable material in order to gain the target of language teaching.

The Description of Vocabulary

1. The Definition of Vocabulary

Vocabulary can be defined as "words we must know to communicate effectively; words in speaking (expressive vocabulary) and words in listening (receptive vocabulary)" (Neuman & Dwyer, 2009, p. 385). Hornby (1995) defines vocabulary as "the total number of
words in a language; vocabulary is a list of words with their meanings". While Ur (1998) states: “Vocabulary can be defined, roughly, as the words we teach in the foreign language. However, a new item of vocabulary may be more than just a single word: for example, post office, and mother-in-law, which are made up of two or three words but express a single idea. A useful convention is to cover all such cases by talking about vocabulary "items" rather than "words." In addition, Burns (1972) defines vocabulary as "the stock of words which is used by a person, class or profession. According to Zimmerman cited in Coady and Huckin (1998) vocabulary is central to language and of critical importance to the typical language learning. Furthermore, Diamond and Gutlohn (2006) in www.readingrockets.org/article state that vocabulary is the knowledge of words and word meanings.”

From the definitions above, it can be concluded that vocabulary is the total number of words that are needed to communicate ideas and express the speakers' meaning. That is the reason why it is important to learn vocabulary.

Kinds of Vocabulary

Some experts divide vocabulary into two types: active and passive vocabulary. Harmer (1991) distinguishes between these two types of vocabulary. The first type of vocabulary refers to the one that the students have been taught and that they are expected to be able to use. Meanwhile, the second one refers to the words which the students will recognize when they meet them, but which they will probably not be able to pronounce. Haycraft, quoted by Hatch and Brown (1995), indicate two kinds of vocabulary, namely receptive vocabulary and productive vocabulary.

a. Receptive Vocabulary

Receptive vocabulary is words that learners recognize and understand when they are used in context, but which they cannot produce. It is vocabulary that learners recognize when they see or meet in reading text but do not use it in speaking and writing (Stuart Webb, 2009).

b. Productive Vocabulary

Productive vocabulary is the words that the learners understand and can pronounce correctly and use constructively in speaking and writing. It involves what is needed for receptive vocabulary plus the ability to speak or write at the appropriate time. Therefore, productive vocabulary can be addressed as an active process, because the learners can produce the words to express their thoughts to others (Stuart Webb, 2005).
3. Vocabulary Mastery

In order to understand the language, vocabulary is crucial to be mastered by the learner. Vocabulary mastery is needed to express our ideas and to be able to understand other people's sayings. According to Webster (1992) mastery refers to (1) a. the authority of a master: dominion, b. the upper hand in a contest or competition; superiority, ascendency and (2) a. possession or display or great skill or technique, b. skill or knowledge that makes one master of a subject comment. While Hornby (1995) defines mastery as complete knowledge or complete skill. From that definition, mastery means complete knowledge or great skill that makes someone a master in a certain subject.

The specificity of any individual’s vocabulary knowledge depends on the person and his motivation, desires, and need for the words (Hatch and Brown, 1995). Vocabulary mastery refers to the great skill in processing words of a language. It is an individual achievement and possession (Rivers, 1989). For that reason, the biggest responsibility in increasing the knowledge is in the individual himself. The success in widening the vocabulary mastery requires their own motivation and interest on the words of a language. From the definition above, we can conclude that vocabulary mastery is an individual’s great skill in using words of a language, which is acquired based on their own interests needs and motivation. Vocabulary mastery plays an important role in the four language skills and it has to be considered that vocabulary mastery is one of the needed components of language.

The Techniques in Teaching Vocabulary

This section reports on research results aimed at investigating the techniques used by a teacher of English in presenting the meaning and form of vocabulary.

Commonly, there are several techniques concerning the teaching of vocabulary. However, there are a few things that have to be remembered by most English teachers if they want to present a new vocabulary or lexical items to their students. It means that the English teachers want students to remember new vocabulary. Then, it needs to be learnt, practiced, and revised to prevent students from forgetting. Techniques employed by teachers depend on some factors, such as the content, time availability, and its value for the learners (Takač, 2008). This makes teachers have some reasons in employing certain techniques in presenting vocabulary. In presenting one planned vocabulary item, the teacher usually combined more than one technique, instead of employing one single technique. Teachers, furthermore, are suggested to employ planned vocabulary presentation as various as possible (Pinter, 2006).

Here are some techniques of teaching vocabulary as stated by Brewster, Ellis, and Girard (1992).

a. Using Objects

Using this technique includes the use of realia, visual aids, and demonstration. They can function to help learners in remembering vocabulary better, because our memory for objects and pictures is very reliable and visual techniques can act as cues for remembering words.
(Takač, 2008). In addition, Gairns & Redman (1986) state that real objects technique is appropriately employed for beginners or young learners and when presenting concrete vocabulary.

Objects can be used to show meanings when the vocabulary consist of concrete nouns. Introducing a new word by showing the real object often helps learners to memorize the word through visualization. Objects in the classroom or things brought to the classroom can be used.

b. Drawing

Objects can either be drawn on the blackboard or drawn on flash cards. The latter can be used again and again in different contexts if they are made with cards and covered in plastic. They can help young learners easily understand and realize the main points that they have learned in the classroom.

c. Using Illustrations and Pictures

Pictures connect students' prior knowledge to a new story, and in the process, help them learn new words. There are plenty of vocabularies that can be introduced by using illustrations or pictures. They are excellent means of making the meaning of unknown words clear. They should be used as often as possible. The list of pictures includes: posters, flashcards, wall charts, magazine pictures, board drawings, stick figures and photographs. Pictures for vocabulary teaching come from many sources. Apart from those drawn by the teacher or students, they are sets of colourful pictures intended for schools. Pictures cut out of newspapers and magazines are very useful as well. Nowadays many readers, vocabulary books and coursebooks contain a vast number of attractive pictures that present the meaning of basic words. The teacher can use learning materials provided by the school. They can also make their own visual aids or used pictures from magazines. Visual support helps learners understand the meaning and helps to make the word more memorable.

d. Contrast

Some words are easily explained to learners by contrasting it with its opposite, for instance, the word "good" contrasted with the word "bad". But some words are not. It is almost impossible to contrast the words whose opposite is the gradable one. When the word "white" is contrasted with the word "black", there is an "in between" word "grey". Furthermore, verb "contrast" means to show a difference, like photos that reveal how much weight someone lost by contrasting the "before" and "after" shots.

Many more studies have also shown that vocabulary is best acquired if it is similar to what is already learnt (e.g. Rudska et al., 1982, 1985), it is not surprising that learning synonyms is a way to expand our vocabulary. Learning about synonyms is important also because this is how dictionaries are organised. Putting bilingual dictionaries aside, mono-lingual
dictionaries essentially use words to explain words, and in this process, synonyms are often used (Ilson, 1991).

e. Enumeration
An enumeration is a collection of items that is a complete, ordered listing of all of the items in that collection. It can be used to present meaning. In other words, this technique helps when any word is difficult to explain visually. We can say "clothes" and explain this by enumerating or listing various items. Teacher may list a number of clothes e.g. address, a skirt, trousers etc., and then the meaning of the word "clothes" will become clear. The same is true of 'vegetable' or "furniture", for example (Harmer 1991).

f. Mime, Expressions and Gestures
Klippel (1994) implies that "mime or gesture is useful if it emphasizes the importance of gestures and facial expression on communication. At the essence it can not only be used to indicate the meaning of a word found in reading passage, but also in speaking activity as it stresses mostly on communication. Many words can be introduced through mime, expressions, and gestures. For example, adjectives: "sad", "happy"; mime and taking a hat off your head to teach hat and so on.

Several studies have emphasised the role of gestures in second language (L2) acquisition (Gullberg, 2008). Teachers tend to gesture a lot (Sime, 2001; Hauge, 1999), especially when addressing young learners and/or beginners. It is commonly acknowledged that "teaching gestures" capture attention and make the lesson more dynamic. Using analyses of video recordings of English lessons to French students, Tellier (2007) determined three main roles for teaching gestures: management of the class (to start/end an activity, to question students, request silence, etc.), evaluation (to show a mistake, to correct, to congratulate, etc.) and explanation to give indications on syntax, underline specific prosody, explain new vocabulary, etc.). Teaching gestures appear in various shapes: hand gestures, facial expressions, pantomime, body movements, etc. They can either mime or symbolise something and they help learners to infer the meaning of a spoken word or expression, providing that they are unambiguous and easy to understand. This teaching strategy is thus relevant for comprehension (Tellier, 2007). However, its utility may depend on the kind of gesture used by the teacher. It has been highlighted that foreign emblems, for instance, may lead to misunderstandings when it is not known by the learners (Hauge, 1999; Sime, 2001).

In addition to supporting comprehension, teaching gestures may also be relevant for learners' memorisation process. Indeed, many second language teachers who use gestures as a teaching strategy declare that they help learners in the process of memorising the second language lexicon. Many of them have noticed that learners can retrieve a word easily when the teacher produces the gesture associated with the lexical item during the lesson. Others have seen learners (especially young ones) spontaneously reproducing the gesture when saying the word. The effect of gestures on memorisation is thus something witnessed by many but hardly explored on a systematic and empirical basis (Tellier, 2008).
g. Guessing from Context

Guessing from context as a way of dealing with unfamiliar vocabulary in unedited selectionshas been suggested widely by L1 and L2 reading specialists (Dubin, 1993). Nation and Coady (1988) claim that there are two types of contexts. The first type is the context within the text, which includes morphological, semantic and syntactic information in a specific text, while the second one is the general context, or non-textual context, which is the background knowledge the reader has about the subjects being read. Williams (1985) agrees with Nation and Coady in considering the specific context as “the other words and sentences that surround that word….. it follows that other words in the context of the unfamiliar word often ‘throw light on’ its meaning. These other words can be found in the sentence containing the unknown word or other sentences beyond the sentence of the unknown item. Similarly, McCarthy (1988) sees context as within the text itself i.e. the morphological, syntactic, and discourse information, which can be classified and described in terms of general features. Learning from context not only includes learning from extensive reading, but also learning from taking part in a conversation, and learning from listening to stories, films, television or the radio (Nation, 2001). In order to activate guessing in a written or spoken text, there should be four elements available: the reader, the text, unknown words, and clues in the text including some knowledge about guessing. The absence of one of these elements may affect the learner’s ability to guess. Furthermore, this technique encourages learners to take risks and guess the meanings of words they do not know as much as possible. This will help them build up their self-confidence so that they can work out the meanings of words when they are on their own. There are many clues learners can use to establish meanings for themselves, such as illustrations, similarity of spelling or sound in the mother tongue, and general knowledge (Walters, 2004).

I. Eliciting

This technique is more motivating and memorable by simply giving pupils a list of words to learn.

j. Translation

Even though translation does not create a need or motivation of the learners to think about word meaning (Cameron, 2001), in some situations translation could be effective for teachers, such as when dealing with incidental vocabulary (Thornbury, 2002), checking students’ comprehension, and pointing out similarities or differences between first and second language, when these are likely to cause errors (Takač, 2008). There are always some words that need to be translated and this technique can save a lot of time.

4) Scales

After the students have learnt two contrasted or related gradable items, this can be a useful way of revising and feeding in the new items.
5) Examples of the Type

To illustrate the meaning of subordinates, such as flowers, vegetables, and foods, it is a common procedure to exemplify them e.g. rose, jasmine, and orchid are all flowers. But the technique cannot be applied in delivering the words that belong to more than one ordinate.

Drilling

Drilling is employed to make learners get accustomed to the word form especially to how it sounds. To make learners more familiar with the word, drilling should be clear and natural (Thornbury, 2002). Drilling is very necessary since learners need to say the word to themselves as they learn it to recall the words from memory (Ellis & Beaton, 1993, in Read, 2000).

Spelling the Word

The primary means of spelling is actually memorizing words (Reed, 2012). Word spelling needs to be considered since spelling forms of English words is not always inferred by the pronunciation.

Learners’ Active Involvement

Employing this technique, the teacher encourages the students to find out word’s meaning by elicitation (Takač, 2008). Elicitation maximizes learners’ speaking opportunities, and acts as a way of checking learners’ understanding (Thornbury, 2002). This technique also includes personalization, which is using the word by learners in a context or sentence that is related to their life.

Related to the above techniques, Pinter (2006) argues that teachers are suggested to conduct planned presentations of vocabulary as various as possible, so it is better that teachers present word meaning and form by combining more than one technique. In addition, Takač (2008) points out that in choosing which techniques to be used in the classroom, teachers consider time availability, the content or teaching material.

Vocabulary learning strategies

Beside the above techniques, there are also, vocabulary learning strategies that teachers can take into account. They can train their students to use these strategies. Schmitt and McCarthy (1997) propose strategies to learn vocabulary as follows: (1) guessing from context, (2) using word parts and mnemonic techniques to remember words, and (3) using vocabulary cards to remember foreign language-first language word pairs. It is supported by Murcia (2001) who also proposes three strategies to learn vocabularies. The first strategy is guessing meaning from context; she says that a context is rich enough to give adequate clues to guess the word’s meaning. The second strategy is mnemonic devices: she proposes
keyword technique. When seeing or hearing the target word, the learner is reminded of the keyword. The third strategy is vocabulary notebooks; she suggests a memory aid in independent learning by setting up vocabulary notebooks.

Based on the techniques used for presenting new vocabulary and vocabulary learning strategies, the experts suggest lots more techniques that are claimed to be helpful for students to learn vocabulary in an easier way. What the researcher sees as better way to teach vocabulary is by learning in rich contexts. According to Stahl (2005) in http://www.readingrockets.org, students probably have to see a word more than once to place it firmly in their long-term memories. This does not mean more repetition or drilling of the word, but seeing the word in different and multiple contexts.

Finally, teachers may encourage students to keep a vocabulary notebook because a great deal of vocabulary growth ultimately depends on the learner. They may have students who are successful vocabulary language learners share their notebook methods. For students who need help, they can demonstrate how to set up a vocabulary notebook that is neat and organized in a manner that will facilitate multiple retrievals of the words. If the notebook is not set up well, then learners are less likely to practice the words, which defeats the purpose of keeping the notebook in the first place.

Moreover, in presenting one planned vocabulary item, the teacher usually combine more than one technique, instead of employing one single technique. Teachers are suggested to employ planned vocabulary presentations as various as possible (Pinter, 2006).

Conclusion

This piece of work aims to highlight the importance of vocabulary learning as an essential part in foreign language learning. Although it has been neglected for many decades, during the 80s it became a 'hot' topic for researchers. Lexical knowledge is central to communicative competence and to the acquisition of a second/foreign language and a lack of vocabulary knowledge is an obstacle to learning.

An attempt is made to review the trends in the area of teaching vocabulary through various techniques ESL/EFL teachers use when teaching. Before presenting the meaning or form of vocabulary items, teachers need to notice the type of the vocabulary, the students' level and characteristics, and also the value of the techniques for the learners. In other words, students' age, level of education as well as English proficiency ... etc may affect their learning, so teachers need to be aware of these differences when applying their teaching technique's. They can further provide their students with vocabulary learning strategies with opportunities to encounter words repeatedly and in more than one context.
