## **A META-ANALYSIS ON PREVENTIVE OCCUPATIONAL SAFETY AND HEALTH ACTIVITIES IN PRESCHOOL CENTRE IN PEOPLE REPUBLIC OF CHINA (PRC)**

### **Abstract:**

The main purpose of this paper is to examine the feasibility of having preventive occupational safety and health activities in preschool centers in People Republic of China (PRC). Specifically, it hopes to investigate whether there is a need for constructing preventive occupational safety and health activities in preschool centers in People Republic of China (PRC). Meta-analysis approach was adopted to analyze a sample of 169 articles. The finding concluded that about 67% of them highlighted the importance of having preventive occupational safety and health in preschool centers. However, there has been a lack of study done in the context of People Republic of China (PRC). It implied that there is an urgent need to improve and sustain the promotion of preventive occupational safety and health activities in China. The development of human resource management among educators in preschools centers in China is also another area that should be further emphasized by industry practitioners. This paper contributed to the knowledge of sustainability development in the context of pre-schools in China. Its empirical results may be helpful for policy makers to strategies human resource policies to sustain the occupational safety and health in preschool centers in China.
