THE DETERMINATION OF THE SATISFACTION LEVELS OF THE SOCIETY ABOUT FAMILY MEDICINE SYSTEM

Abstract:

The purpose of this study is to determine the satisfaction levels of the society about family medicine system in Konya (Turkey). Data were collected by a questionnaire form developed by the researchers. The questionnaire form consists of 52 items and five main titles. The questionnaire was implemented to 287 volunteer participants. Statistical analyses were evaluated by using SPSS program and descriptive statistics and t test were used on the collected data. At the end of the study, it was concluded that the participants were almost satisfied with the family physician and they wanted this system to be continued and improved.
