INVESTIGATION OF PRE-SCHOOL AND ELEMENTARY SCHOOL PRESERVIE TEACHER'S HOPELESSNESS LEVELS IN TERMS OF VARIOUS VARIABLES

Abstract:

Hopelessness expresses a negative expectation with a pessimistic attitude, a pessimistic approach and a failure feature. In this study, various variables affecting the hopelessness levels of the fourth (last) grade students that study pre-school and elementary school teaching departmentants at Kocaeli University in 2017-2018 semestre will be examined. At this point the problem of this research is hopelessness levels of pre-service and elementary school preservice teachers to be employed in various educational institutions in the future. This research is appropriate to descriptive research model from the types of quantitative research and 81 pre-school and 59 elementary school preservice teachers participated for this investigation. In the research, "Beck Hopelessness Scale" developed by Aaron Temkin Beck and "Personal Information Form" developed by researchers were used. The results of the research will be shared after the data analysis as the results of the obtained data are still being reviewed.

Keywords:

Hopelessness level, pre-service teachers, elementary school teachers
