## **USING CHATGPT TO ENHANCE TEACHING AND LEARNING IN UNIVERSITIES**

### **Abstract:**

AI is rapidly transforming the teaching landscape in universities, benefiting both educators and students. Various forms of AI can assist in numerous ways. Many teachers have embraced ChatGPT as a personal assistant, with some even humorously referring to it as their "new best friend." ChatGPT can significantly aid in research by saving time with data organization and analysis. For students, AI tools such as Grammarly, ChatGPT, Copilot, and Bard can assist with writing, grammar, and generating ideas for assignments.

This presentation will demonstrate how ChatGPT can be used to design student assignments, organize data, and support teaching in a university setting. As students are already adopting this technology, it is crucial for educators to engage with it as well.

### **Keywords:**

University teaching, AI, ChatGPT, Student assignments
