THE PERCEPTION OF OCCUPATIONAL HEALTH AND SAFETY: AN APPLICATION ON THE STUDENTS OF TECHNICAL VOCATIONAL SCHOOL

Abstract:

Occupational accidents are one of the most crucial problems in working life. A good many people lose their lives because of these accidents around the world. Thousands of people from different sectors die because of the accidents, which are one of the leading problems in Turkey. In this context, it is very obvious that legislative regulations are not enough in terms of preventing occupational accidents and making people aware about these kinds of accidents and training them about their sectors are also crucial.

Despite the differences between the work risks of craft who are going to work in different sectors, they are expected to have a certain level of perception about hindering occupational accidents. The aim of this study is to determine the level of occupational health and security perceptions of the students at Technical Vocational School. A questionnaire was used in this study in order to identify their perceptions.

Security education, security communication, security awareness and fatalism scale were used in order to detect the security perceptions of the students. The results of this study are expected to guide and shed light on the regulations for creating a healthy and safe working environment and to develop the awareness about occupational health and security of the students.
